

TRAVERSE Cloud Hosting Powered by Microsoft Azure Managed by ABS

We can help you achieve peace of mind with our cloud backup solutions for your system

The TRAVERSE Microsoft Cloud Hosting Service from ABS is the easiest way to migrate your TRAVERSE software to the cloud and reduce internal I.T. overhead. Our Microsoft Cloud Hosting Service includes Azure cloud server space for your TRAVERSE software, coupled with fully-managed IT support for TRAVERSE.

The ABS TRAVERSE Cloud Hosting ensures a technology infrastructure that is secure, up-to-date, and working hard for your users. With TRAVERSE Cloud Hosting, you accomplish that and free up your time to reach strategic goals instead of chasing down maintenance issues.

Why ABS is Different

ABS will migrate your TRAVERSE databases, users and roles from your on premise or existing cloud solution provider to the ABS Azure service. The first step is a trial migration. ABS will migrate your TRAVERSE databases and users to the ABS Azure service. We will configure your local workstations with shortcuts to the cloud service. User testing and validation will take place from your local computers with your company data.

After validation is complete a live migration will be scheduled at the start or end of a mutually agreed workday. TRAVERSE may be unavailable for a brief period of time while the production databases are restored on our cloud servers.

Authorized contacts may call into ABS for support regarding the TRAVERSE cloud solution. ABS Support can assist with adding users, disabling users, adjusting security roles or any other cloud related issue including new local computer setup, password reset or TRAVERSE printing.

- Data stored at Microsoft Data Centers located in the US.
- All logins/access are made over 2048 bit encrypted connections.
- SQL Server included
- Nightly database backup to Microsoft cloud storage with two week retention on backups.
- Hourly transaction log backups during business hours 8-5.
- Modifications will be installed by ABS.
- TRAVERSE Build updates are installed once per quarter.
- Cloud servers are kept up-to-date with all Microsoft updates and service packs, via a scheduled update cycle.
- Access to our cloud support team for connection issues, login, or printing issues, or to set up a new employee login, reset password, or disable a login.
- Cold site replication to a different Microsoft geographic region for disaster recovery
